To whom it may concern:

***RE: Clarks Mining Service***

RADCO Technologies (formerly known as GT Drilling Australia) have been utilising Clarks Mining Services for almost 7 years since our company's inception in 2009

During this time Clark's have supplied their Air Track style drill rigs and Grouting equipment to our underground coal operations. We now own and operate two types of Clarks Air Tracks:

1. Boom mounted feed frame
2. Horizontally mounted feed frame

The diversity for the Clark Air Track has proven itself again and again and we utilise this style of rig in areas with restricted access as well as restricted mine site services for gas drainage, continuous coring (vertical and horizontal) and exploration purposed.

Clarks Mining Service's aftermarket support and engineering capabilities have been second to none and we have no hesitation in recommending Clarks Mining.

RADCO Technologies is a specialised provider of Underground Coal Inseam Directional and Rotational Drilling for Gas Drainage and Exploration

Yours faithfully,

Ivan Levin  
Operations Manager
