To whom it may concern:

Regarding Clarks Mining Services.

We wish to advise that our company has been involved with Clarks Mining Services for approximately ten years. Throughout this time the main product that we have used is the Mk2 rib drill which has outperformed its competitors. We own several of these drills now for drilling holes for earthing rods. As a follow on from these items Clarks have custom made two small mobile drill rigs that have been used on construction sites and in Sydney tunnels. We find that their products perform well, are easily maintained and the operators are happy with the usability of the machine. Clark's ready responsiveness to technical matters and supply of spare parts is pivotal to our performance. We have no hesitation in recommending Clarks Mining Services for their range of products and their complete service offering.

Power and Earth Control has a reputation for reliability, responsiveness and understanding client needs, Power & Earth Control has positioned itself as a dependable solution within its area of expertise: earthing, lightning protection and surge & filtering protection.

Yours Sincerely

Simon Valencia
